The new Morita TriAuto ZX2 - a new device saves your files, time and money

Dr. Sebastian Riedel

Germania, Lector FDI

As successor of the cordless endodontic motor with integrated apex locator, TriAuto ZX, it continues to be the only endodontic system on the market which combines both functions in one handpiece.

With its easy, intuitive operation and automatic functions, it is a guarantee at all times for absolutely reliable and safe results. The safety functions Optimum Torque Reverse (OTR) und Optimum Glide Path (OGP) are new features. OGP simplifies glide path creation for the practitioner. And OTR protects against file breakage and microcracks by automatically reversing the rotational direction when the torque level is exceeded.

This is how TriAuto ZX2 protects the natural tooth substance and makes the treatment even more efficient.

WORKSHOP

Număr de locuri limitate
Contribuția de participare la workshop: 250 lei.
Înscrierea la workshop este condiționată de înscrierea la congres.

LECTOR

Dr. Sebastian Riedel
Germania, Lector FDI

born 1977

1998-2003 Studies, University of Würzburg/ Bavaria
2003 State examination and graduation as Dr. med.
2004 Employed in a dental surgery in Zurich / Switzerland
2005-2007 Dental surgery of Prof. Alexander Gutowski / Schwäbisch Gmünd, focus on prosthodontics
Since 2008 Dental surgery with Dr. Jörg Schröder / Berlin, focus on endodontology and restorative dentistry
Since 2013 Private practice for endodontology
Since 2007 Focus on endodontic treatments
Since 2010 Speaker and course instructor

Member in ESE, DGET, SSE,
Guest author in the Blog „Wurzelspitze“ (Root tip)

CONFERINȚĂ

My procedure for an easier and more predictable endodontic treatment

In this lecture, the most important and interesting facts about the endodontic treatment will be shown.

Starting with clinical diagnostics, shaping and disinfection to filling the root canal, every step will be discussed by clinical cases.

New developments from premium manufacturers can save money and increase the quality of our endodontic treatment, so the use of CBCT and devices for shaping the root canal will be presented.

In the practical part, we will use the new Morita TriAuto ZX2 device to do a mechanical glide path and mechanical instrumentation of the root canal.
